OWASP Juice Shop - Login Admin

For this challenge I managed to log in as the admin account.
So when snooping around I saw this in one of the reviews:

So I took this email and tried to bypass the authentication. The first thing I did was to check basic SQLi syntax and I managed to provoke an error (which is also a challenge xD)

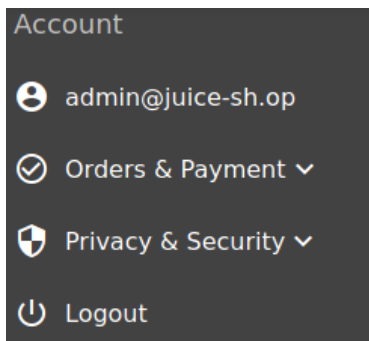

So next I tried to use the admin email I found earlier:

What I did was just comment out the password that is most likely handled after the email. And this is the result:

Done :)
