**Mark Seliternikov**

TryHackMe - OWASP Top 10 - [Severity 6] Security Misconfiguration
**[Easy]**

For this lab we are getting a web application and we are supposed to log in with a default user.

We are given the hint to try to look at the source code and maybe we'll find something.
After inspecting the HTML source and the JavaScript source for a while, I've wondered what happens if I google this web app.

I've found the GitHub source code of the web app!

When scrolling down you see there's a default account.
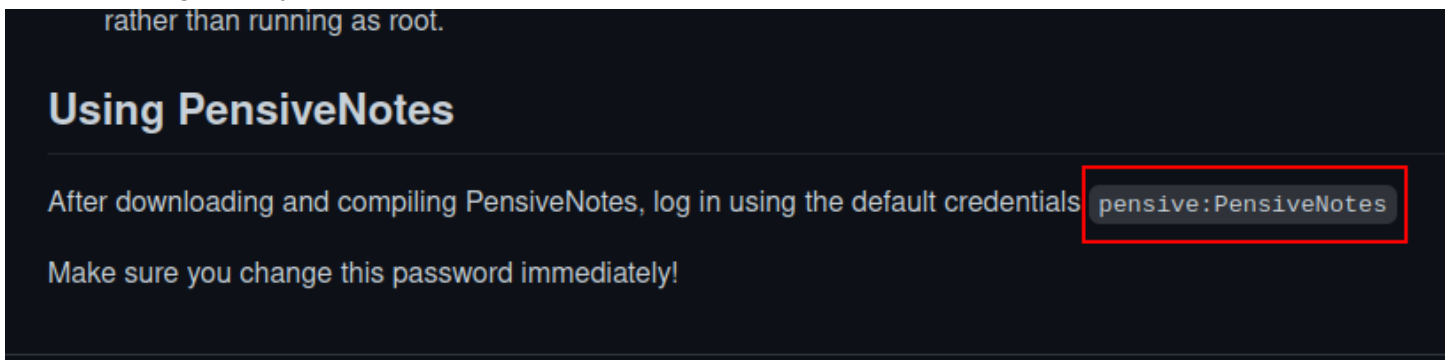

Then I've tried using these credentials…

Pensive Notes

Create New Note

Your notes:

Default Credentials are a security risk!

Default credentials are a (surprisingly common) security flaw, especially with IoT (Internet of Things) Devices.

Have a flag! thm{4b9513968fd564a87b28aa1f9d672e17}

Welcome To Pensive Notes

If you wanted to write your own note, the contents would be shown like this.

Thats the flag!

In conclusion: CHANGE DEFAULT CREDENTIALS
